# CD4069UBC Inverter Circuits

#### **General Description**

The CD4069UB consists of six inverter circuits and is manufactured using complementary MOS (CMOS) to achieve wide power supply operating range, low power consumption, high noise immunity, and symmetric controlled rise and fall times.

This device is intended for all general purpose inverter applications where the special characteristics of the MM74C901, MM74C907, and CD4049A Hex Inverter/Buffers are not required. In those applications requiring larger noise immunity the MM74C14 or MM74C914 Hex Schmitt Trigger is suggested.

All inputs are protected from damage due to static discharge by diode clamps to  $\rm V_{DD}$  and  $\rm V_{SS}.$ 

#### **Features**

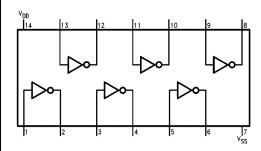

- Wide supply voltage range: 3.0V to 15V
- High noise immunity: 0.45 V<sub>DD</sub> typ.
- Low power TTL compatibility: Fan out of 2 driving 74L
  - or 1 driving 74LS
- Equivalent to MM74C04

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be perated at these limits. The table of "Recommended Operating Conditions" and Electrical Characteristics table provide conditions for actual device operation.

Note 2:  $V_{SS} = 0V$  unless otherwise specified.
